This is a digital copy of a book that was preserved for generations on library shelves before it was carefully scanned by Google as part of a project to make the world's books discoverable online.

It has survived long enough for the copyright to expire and the book to enter the public domain. A public domain book is one that was never subject to copyright or whose legal copyright term has expired. Whether a book is in the public domain may vary country to country. Public domain books are our gateways to the past, representing a wealth of history, culture and knowledge that's often difficult to discover.

Marks, notations and other marginalia present in the original volume will appear in this file - a reminder of this book's long journey from the publisher to a library and finally to you.

Usage guidelines

Google is proud to partner with libraries to digitize public domain materials and make them widely accessible. Public domain books belong to the public and we are merely their custodians. Nevertheless, this work is expensive, so in order to keep providing this resource, we have taken steps to prevent abuse by commercial parties, including placing technical restrictions on automated querying.

We also ask that you:

+ *Make non-commercial use of the files* We designed Google Book Search for use by individuals, and we request that you use these files for personal, non-commercial purposes.

+ *Refrain from automated querying* Do not send automated queries of any sort to Google's system: If you are conducting research on machine translation, optical character recognition or other areas where access to a large amount of text is helpful, please contact us. We encourage the use of public domain materials for these purposes and may be able to help.

+ *Maintain attribution* The Google "watermark" you see on each file is essential for informing people about this project and helping them find additional materials through Google Book Search. Please do not remove it.

+ *Keep it legal* Whatever your use, remember that you are responsible for ensuring that what you are doing is legal. Do not assume that just because we believe a book is in the public domain for users in the United States, that the work is also in the public domain for users in other countries. Whether a book is still in copyright varies from country to country, and we can't offer guidance on whether any specific use of any specific book is allowed. Please do not assume that a book's appearance in Google Book Search means it can be used in any manner anywhere in the world. Copyright infringement liability can be quite severe.

About Google Book Search

Google's mission is to organize the world's information and to make it universally accessible and useful. Google Book Search helps readers discover the world's books while helping authors and publishers reach new audiences. You can search through the full text of this book on the web at `http://books.google.com/`

TAKE NOTICE.

The Groups below mentioned having been sold at private sale before the issue of the Catalogue, will not be offered at the public sale, viz:

Nos. 11, 12, 13, 14, 141, 153, 162, 185, 186, 194½, 200, 271½.

Also the s hf of s e qr, and s hf of s w q of section 13, township 12 n, Range 11 w, in group No. 473, is sold, leaving 240 acres in said group to be offered.

THE ST. MARY'S FALLS SHIP CANAL CO.

By an act of Congress approved August 26, 1852, seven hundred and fifty thousand acres of land were granted by the United States to the State of Michigan, for the purpose of aiding in the construction of a ship canal around the Falls of St. Mary in said State, and thus opening Lake Superior to navigation by vessels from the lower Lakes.

The State accepted the grant and appointed Commissioners to let the building of the canal, and agents to select the lands.

The Commissioners entered into a contract with Joseph P. Fairbanks, Erastus Corming and others, for building the canal. This contract was subsequently assigned to the St. Mary's Falls Ship Canal Company, a corporation created by an act of the Legislature of the State of New York. Under this contract the canal was completed at an expense of $1,000,000.

The Company thereupon became entitled to and received from the State the patents for the 750,000 acres. The lands were selected by agents named by the Company and approved by the Governor.

All the iron and copper lands in the upper Peninsula have been sold to the St. Mary's Canal Mineral Land Company, leaving the pine and farming lands, which are those that will be offered at auction on the 2nd day of September next at Detroit.

The sale has been ordered with the view of winding up the affairs of the Company, as soon as possible, by giving the stockholders an opportunity to surrender their stock by purchasing lands at the sale, and thus holding their lands in severalty, which many of them are desirous of doing, and as it will be a public sale of all the lands of the Company,

without any reservation, any person desirous of purchasing, will have the opportunity to select and bid upon any of these pine lands at prices, lower than such lands have ever been offered.

It will thus be the last opportunity which the public will have of purchasing any of these lands at auction.

The lands have, for the purposes of the sale, been divided into 744 groups, varying in size from forty acres to several thousand acres, and a minimum price or valuation fixed upon each group; as will be seen by reference to the following pages.

The valuation was made by Messrs. Woodman and Frost, and is based mainly upon the reports of the woodsmen who examined the lands and scaled the timber.

It was ordered by a vote of the Directors, on the 28th of July, A. D. 1862, and was required to be at an average of $2,10 per acre, and "of such a relative character, that the "purchase, at such valuation of any group in preference to "any other group, will give no real advantage to the "purchaser."

Not only the quality and quantity of timber, but the distance from floating water was kept constantly in view, in fixing the minimum price. It will be observed that very different prices are put upon groups having about the same number of feet to the acre, and of equal quality. Where this difference occurs upon groups lying upon the same river, it is due, generally to the different distances from floating water, and to the distance from present lumbering operations upon such river. *Below* the highest point on any river from which logs have been run, the obstructions have, of course, been removed; *above*, the obstructions may be considerable, requiring more or less expenditure for their removal, and so lessening the value of the lands above.

The price put upon groups lying upon the waters of the Saginaw, Muskegon and other streams where there are present lumbering operations, is rather below than above the present selling rates; but lands of equal intrinsic value situated upon streams where there are no sawmills, and where it is doubtful

when there will be, were necessarily put at a very low figure in order to bring them to an average of $2,10 per acre, as ordered by the Directors; so that the minimum prices put upon this class of lands should be taken as an index of their relative rather than of their absolute value, and do not indicate the rates which the Company has asked for, or at which it would be willing to sell them, at private sale.

It may be thought that there is too great a difference in the valuation of lands lying upon rivers where there is lumbering, and those upon rivers where there is none.

This point was fully considered by those who made the valuations, and they exercised their best judgment in the matter. The difference is apparent, and the purchaser must exercise his own judgment in buying those which are valued low, and have no present *market* value, on account of lying outside of the range of existing lumbering operations, or those which are valued comparatively higher and are so situated as to be immediately or very soon available.

The valuation of the lands lying outside of the range of present lumbering, is indeed, very low; so low, it is thought, that those who purchase them and hold until a demand arises will, generally make a considerably larger profit than those who purchase the higher valued lands, that lie upon the rivers already occupied by lumbering establishments. In this view, it is thought that the lands which lie upon rivers where there are no sawmills, offer great inducements to lumbermen who may appreciate the advantage of being the first to occupy such streams.

In fixing the valuations, different prices were assumed in different localities for the value of stumpage within an average haul of one mile from floating water, which stumpage varied from 60 cents to 25 cents per 1000 feet, according to locality.

A reduction of one-tenth in price was made for every additional half mile of hauling, after the first mile.

This is an arbitrary standard, but in making the valuations, some rule in this respect became necessary, and this was

adopted. Whether it is too high or too low, the purchaser must decide for himself.

By this rule, a group worth five dollars per acre at an average haul of a mile, would stand at $4,50 with a haul of a mile and a half, and at one dollar with a haul of five miles.

Of the hewing timber, hemlock and hard wood, no mention, in general, is made in the catalogue.

Many of the groups are wholly or in part good farming lands. Of this, too, no mention has generally been made. It was thought that purchasers, at the sale, would so generally make their purchases solely with reference to the *pine*, that it was hardly worth while to note points which would only increase the bulk of the catalogue without any corresponding advantage.

The catalogue shows the quality and quantity of pine upon each group according to the estimates in the office of the Company, and the maps show the distance from floating water, *so that the purchaser has before him, substantially, all the information in possession of the Company, and can form his own estimate of the value of the different groups, without regard to the valuation, or minimum price.*

These lands were selected with great care nearly ten years since. All the pine lands in the state then owned by the Government were examined by the agents of the Company, and the best only selected. In all cases two, and in many cases several distinct examinations were made by different parties unknown to each other before they were taken by the Company, and with rare exceptions the selections were well made.

After the lands were all taken, a re-examination and a scaling of the timber upon every forty acre lot was made by competent men; so that there is in the office of the Company at Detroit, an estimate of the timber upon each tract. These estimates were made for the exclusive use of the Company, but in order that those who may wish to purchase may have all the information which it may be in the power of the Company to give, it has been determined to open the field notes and scaling estimates to public inspection; and every

facility for examining them will be offered to those who may call at the Company's office for that purpose.

Nearly all the white pine between the Alleghanies and the Rocky Mountains is in Michigan and a portion of Wisconsin and a small part of Minnesota. It is estimated by the best judges that the 500,000 acres thus to be offered at auction embrace more than one half of all the pine lands in Michigan which are equal to these in position and value.

The amount of pine annually cut in Michigan is about 500 millions of feet, which, at an average of 10,000 feet to the acre, gives 50,000 acres as the area annually cut over. Thus in ten years—even if there should be no increase in the amount cut—all the other pine lands in the state that are equal in position and in quality and quantity of timber to those of this Company, would be stripped, if those now offered should be reserved from sale for that period.

There has never before been so favorable an opportunity for purchasing well selected pine lands as that now offered, and no such opportunity will ever come again.

No one who has paid any attention to the subject doubts about the enormous prospective value of pine timber lands; but few have considered how rapidly such lands are being depleted, and how soon and how surely a large advance in price must take place.

The lands at the sale will be offered as they have been arranged in groups, and will all be put up at the same time, but no single group will be offered: or if the Directors so decide, the groups upon one or more rivers will be offered at once. In either case the person bidding the highest premium will be entitled to select a single group or more, or all of those offered as he may determine. Thus a choice of groups will be given, without a direct competition upon any single group.

The biddings will be per acre for choice of groups; so that if one is the highest bidder at five cents per acre, and buys 500 acres he will pay $25 as a premium above the minimum price of the group or groups which he may select.

The stockholders will have no advantage over outside bidders except that the premiums which may be paid for

choice of groups will be divided among *all* of the stockholders.

Those who do not own stock, but prefer to stand in the position of stockholders at the sale, will, doubtless, be able to purchase stock at par, and possibly less, by communicating with the stockholders, or addressing CYRUS WOODMAN, Managing Director, or GEO. S. FROST, agent at Detroit.

The sale will be continued from day to day, until all the lands shall be sold or the biddings cease.

Stockholders will be required to pay 27 per cent. of the amount of their bids in cash, or bonds of the Company: the remaing 73 per cent. they may pay in the stock of the Company, at par of $100 pr share; or they may pay all in money on the same terms as non-stockholders

There are 4,627 shares of the stock of the St. Mary's Canal Mineral Land Company, belonging to this Company, which gives to each stockholder for every two shares in this Company, nearly one share (at $50 per share) in that Company. In other words every $1,000 of Canal Company Stock, is entitled to about $250 in the Mineral Company Stock, and each stockholder who purchases at the sale will have the privilege of taking his ratable share of stock in that Company, which proportion is assumed to be one share of said stock for every two shares of Canal Company stock, but no stockholder will be allowed to purchase said Mineral Land Co. Stock, except in proportion to his purchase of pine lands at the sale. Thus a person holding ten shares of Canal Company Stock may, at his option, either bid in land, to the amount of $1,369 86, or he may buy land to the amount of $1,119 86, and take five shares of mineral Land Co. Stock, making in land and stock, $1,369 86, and, in either case, paying therefor 27 per cent., being $369 86, in cash or bonds, and 73 per cent., being $1,000 in his ten shares of Canal Company Stock.

The Directors, however, reserve the right to withhold said 4,627 shares from the sale, in which case stockholders who buy lands and surrender stock, will, instead of 27 per cent., be required to pay only ten or twelve and a half per cent. of the amount of their bids in cash or bonds of the Company.

Each purchaser—including stockholders—will be required to pay the premium he may bid immediately after he makes his selection, and each stockholder, who becomes a purchaser, will be required to pay the cash proportion of his bid, either in cash or bonds of the company at par, within thirty days after the close of the sale.

The terms of payment from non-stockholders, will be, one-half down, and the remainder in one year with interest, at 7 per cent, payable either in money or the bonds of the Company.

Catalogues of the lands, together with the accompanying maps may be had on application to Geo. S. Frost, agent at Detroit, or to John F. Skinner, Secretary, No. 47, City Exchange, Boston; Hon. Erastus Fairbanks, St. Johnsbury, Vt.; Erastus Corning & Co., Albany; C. & G. Woodman, 33 Pine st., New York; Charles E. Noble, Buffalo; Charles Nelson, Muskegon; Geo. W. Lakin, Milwaukee; Fairbanks & Greenleaf, Chicago; A. P. Brewer, Saginaw.

Those who receive the maps, will please preserve them, as the number is limited, and additional copies cannot be had.

Those who may wish for township diagrams, showing the different groups (in specified localities) on a large scale, can obtain them by writing to Mr. Frost, the agent, at Detroit.

Detroit, May 1., 1863.

NOTES.

The lands will be withheld from private sale after May 15th.

The distance to water as mentioned under each group, means to water that will float logs.

By referring to the maps, it will generally be apparent, whether streams are of sufficient size for floating. Where there would be any doubt about the small streams in this respect, the floating points noted in the returns of the explorers are marked on the maps.

In fixing the minimum price, reference was generally had to the distance from floating water. In some few instances, on the head waters of the streams, the distance to floating water could not be determined by any information in possession of the Company. In such cases the price was fixed by assuming a point from which logs can probably be floated.

The catalogue does not specify the particular part of the sections contained in each group. This could not be done without doubling the size of the catalogue, which it was not thought necessary to do, inasmuch as the particular part of any section which is contained in any group, can be determined by referring to the maps.

The consecutive numbers of the groups are in the order of Ranges. The groups will also be found arranged in the order of rivers, so that under the name of each river will be found all the groups lying upon the waters of such river.

MAPS.

The maps were printed in twelve different sections, which, when put together and mounted, make one whole map, showing all the lands of the Company,

No. 1. Title.
2. Cheboygan River.
3. Lower Manistee River and River Aux Becs Scies.
4. Upper Manistee and Upper Au Sable.
5. Thunder Bay—also the Lower Au Sable of Lake Huron and Pine River.
6. Saginaw Bay—Pine, Rifle and Au Gres Rivers.
7. Muskegon River and Tributaries.
8. Saginaw River—Tributaries the Chippewa, Pine and Titebewassee,
9. West side of the State, including White, Pere Marquette, and Big and Little Au Sable Rivers.
10. Monistique, Fish Dam and Sturgeon Rivers.
11. North Shore of Lake Michigan.
12. Eastern Portion of Upper Peninsula.

The whole map is too large and cumbrous to be sent conveniently by mail, and in most instances applicants for them will want only one or two of the sections of the map as above numbered and designated, and as the number of maps is limited, those who want to look for the lands of the Company on one river only, or within a specified district, will please apply for such section only of the map as will answer their purpose.

SUMMARY OF RIVERS.

Groups arranged in the order of Rivers with a general Description of the Streams.

B.

RIVER AUX BECS SCIES.

This river is about thirty miles in length, rising in a group of lakes of considerable size, about midway between the mouth of the river and the head of Grand Traverse Bay. The pine lands of the company are in this region, and lie upon the lakes and river and on the waters of Platte river. The whole country between Grand Traverse Bay and Lake Michigan has a fine soil and is heavily timbered with hard wood, well adapted to agricultural purposes.

At the mouth of the river Aux Becs Scies, a town has been started which is called Frankfort; a steam mill is now in operation, which supplies the settlements in the vicinity. Another town has been located on the river about eight miles from the mouth, in a rich farming region, by a colony of enterprising settlers from Ohio. Post offices have been established at both these points.

The little lake at the mouth of the river forms a complete natural harbor, which, when improved, will afford security to the shipping of the lakes, and be an important wooding point for steamboats and propellers.

The following Groups comprise all the lands of the company on these waters:

No. of Group.	Acres.	Valuation.	No. of Group.	Acres.	Valuation.
503	916 15-100	$1,100	531	480	120
504	1,200	1,680	532	1,120	1,070

529	600	870			
530	775 74-100	200		13,652 44-100	$16,900

C.

MANISTEE RIVER.

This is one of the largest streams in the State, and is represented by the surveyors as having a rapid current, a large volume of water, and capable of floating logs at all seasons of the year for a distance of upwards of a hundred miles. The stream is about 150 miles in length and has its rise in a high region of country, forming the dividing ridge which separates the waters of Lakes Huron and Michigan.

In this region the company have a large quantity of excellent pine land, well situated upon the stream, along the middle waters other tracts, equally well located, and on the lower waters and branches some very desirable and valuable lands in immediate proximity to present lumbering operations.

The river has been cleared for a distance of 40 or 50 miles, and this portion of the stream has been occupied for years for lumbering purposes. There are five large steam saw mills, making 25 to 30 millions of lumber per year, including two water mills on the Little Manistee. The tributaries to this stream are the Little Manistee, Pine River and Bear Creek, upon all of which lumbering operations have been carried on for years. The facilities for manufacturing and shipping lumber at Manistee are ample to an almost unlimited extent. The large lake at the mouth affords desirable sites for mills, and logs in any quantity may be securely and easily held. The trade in lumber from this point is direct with Chicago, from which it is distant about 175 miles.

The following Groups comprise all the lands of the company on this river:

No. of Group.	Acres.	Valuation.

D.

BIG AND LITTLE AU SABLE RIVER OF LAKE MICHIGAN.

These rivers have been improved and occupied for several years for lumbering purposes, by Charles Mears, Esq. of Chicago, who has a water mill at the mouth of each of these streams capable of cutting, one two and a half, and the other four millions of lumber annually. The facilities for lumbering are naturally good, and the improvements which have been made, have induced settlements in the vicinity. Two villages have grown up under the auspices of Mr. Mears, Hamlin at the mouth of Big Au Sable, and Lincoln, a neat and thriving town, at the mouth of Little Au Sable.

The Pine lands of this company are located at convenient points on both streams.

The following groups comprise all the lands of the company on these rivers:

No. of Group.	Acres.	Valuation.	No of Group.	Acres.	Valuation.

E.

PERE MARQUETTE RIVER.

This stream is one of the finest points for a large lumbering establishment on the coast of Lake Michigan, and perhaps there is no other locality in the State, which offers so many natural advantages for the lumbering business as this.

It is about twenty-five miles by the river from Lake Michigan to the large and compact body of pine, embracing some of the best timber in the State, which is located on both branches of the stream, and so situated, as to afford easy and natural access to the water with ample banking ground at various points along both streams.

The region between the pine and the Lake all along the stream, is rolling good farming land, and the whole country about Pere Marquette is well adopted for farming purposes, and has already been settled to considerable extent.

The Harbor at the mouth of this river, is admirably adapted for mills and lumbering, and logs in any quantity can be securely held. There is a good point also for booming logs about six miles up the river, where a bayou of about one and a half miles in length puts out on the north side of the river.

There is one mill at the mouth which within the past few years has been operated by Mr. Mears, who has made some improvement of the harbor by cutting a new channel into Lake Michigan, and building piers so as to afford some harbor facilities.

The following groups comprise all the lands of the Company on this river:

F.

LITTLE POINT AU SABLE.

The lands at this point are of the first quality, and with the pine there is a considerable quantity of oak and basswood, mixed with beech and maple. There are no lumber establishments here, but at the mouth of the stream is a fine water power. The settlements in this region render the land valuable, and the location is so near Lake Michigan, that the timber is available, and shipments have already been made of shingles and other timber from this coast.

The following groups comprise all the lands of the Company at this point:

No. of Group.	Acres.	Valuation.	No. of Group.	Acres.	Valuation.
647	560	$1,400	653	120	350

652	160	260		3,276 83-100	$8,140

G.

WHITE RIVER.

At this point there are nine steam and water mills, manufacturing some 20,000,000 feet of lumber annually.

The Harbor and Lake at the mouth of White River is considered a most desirable and valuable point for lumbering. The river is some fifty miles in length, and the pine timber is situated all along its course, from the head waters to the mouth. Some twenty-five or thirty miles up the stream there is a rich farming region which is settled to considerable extent.

The following groups comprise all the lands of the company on this river:

H.

MUSKEGON RIVER.

This is one of the most important lumbering streams of the State. The river has its rise in Houghton Lake in the centre of the State, and running in a South-westerly direction, empties into Lake Michigan some 15 miles above the mouth of Grand River. It passes through some of the best portions of the State, and embraces on its waters a large extent of territory timbered with pine. The principal branches are the Little Muskegon or North Branch, Tamarac Creek and Clam River. The large body of Pine on the North Branch and Tamarac Creek is well situated, and considerable lumbering has been done here during the past few years. At the villages of Croton and Newaygo, the former situated at the mouth of the North Branch, and the latter on the Main river some eight miles below, there are water mills. At Newaygo, the mill owned by the Newaygo Company is one of the largest in the State.

The main river has been cleared nearly as far up as Houghton Lake, the stream is large and logs are run cheaply and safely from any point on the river.

There are at the mouth of the river some 18 mills, and here is the point for manufacturing lumber on this stream. There will probably be manufactured the present year on this stream 70 to 75 million feet of lumber. The lake, or harbor, which nature has provided for this river, as at other points on Lake Michigan, is of immense value to the lumbering interest, affording suitable and ample accommodation for the location of mills, and for holding logs. There is a pleasant and thriving village at this point, which is 110 miles distant from Chicago.

This is probably the most important lumbering point on Lake Michigan.

There are regular passenger boats running from here to Chicago.

The following groups comprise all the lands of the Company on the waters of this river.

No. of Group.	Acres.	Valuation.

I.

FLAT RIVER AND FISH RIVER.

These streams are large tributaries of Grand River, coming from the North, and passing through the Southerly and Westerly portion of an extensive and valuable body of pine, which reaches the waters of Saginaw river. There has been no large amount of lumbering on either of these streams, except the manufacture by water mills, principally for local purposes. But, Flat River may be easily opened for floating logs to Grand River, thus bringing into use this large body of timber, which must, in the future, supply the market of the Grand River Valley, and the trade of the Grand River. There are some four or five millions now manufactured on Flat River, a part of which is rafted down the Grand River to market.

The following Groups comprise all the lands of the Company upon Flat River:

No. of Group.	Acres.	Valuation.

J. K. & L.

WATERS OF SAGINAW RIVER.

The streams which form the Saginaw, and upon which the Pine Lands of the Company are located are the Chippewa, Pine, Tittebawassee, Tobacco, Salt and Cass Rivers.

It is hardly necessary to say, that upon all these streams lumbering has been caried on for years; for from these rivers, together with other tributaries, the supply for the Mills at Saginaw is obtained. There are some 40 mills on the Saginaw river, and a large proportion of the timber is now obtained from the Chippewa and Pine rivers.

No locality in the state attracts so much attention at the present time as Saginaw, and the development and progress of the Salt interests is bringing every variety of property and production into notice. The lumber interest has heretofore employed the largest proportion of the capital of that region, and the additional inducements for the investment of capital in the manufacture of salt, will in no degree diminish the value of the lumbering trade.

The manufacture of lumber the present season will probably reach 100 millions. The large proportion of clear lumber produced at Saginaw has always commanded the trade of eastern dealers, and this lumber finds its way in considerable quantities to the Albany, New York and Boston markets.

The following groups embrace all the lands of the Company on the waters of the Saginaw.

M.

RIFLE.

Under this head is comprised the lands lying on the North-west of Saginaw Bay, being principally upon Rifle River; but, a portion of the lands of the Company are located South of Rifle and upon the waters of two smaller streams, the Pine and Saganin Rivers.

The Rifle is a fine lumbering stream; but has not, at the present time, been cleared. Recently, however, a purchase of 1,600 acres has been made, from Capt. Ward, by Eastern parties, on this stream, for mast timber, at the rate of $10 per acre; and, the stream will, doubtless, be cleared the present season. The timber, on the upper part of the river, is of fine quality, large size, and well located. On the lower part, and upon the Pine and Saganin, the timber is smaller although well situated.

Considerable lumbering has been done on the Pine, and the lumber manufactured at a water-mill, at the mouth of the river.

The following Groups comprise all the lands of the Company on Rifle River:

No. of Group.	Acres.	Valuation.	No. of Group.	Acres.	Valuation.

N.

RIVER AU GRES.

This stream empties into Saginaw Bay, a little east of Rifle river. The main stream is deep and navigable for boats for several miles from its mouth; it has numerous branches, the two largest having their rise in the high lands some 25 miles from the bay. These branches have a good current, and water enough for floating logs at nearly all seasons of the year. The pine of the company upon these waters is generally not large, but the timber is thrifty and grows compactly. Some of the groups, however, have large timber, well situated on the stream. This is a natural and valuable point for a large lumber establishment.

No lumbering has been done upon this stream, but there are mills at Tawas City, which is situated on the Bay, about seven miles east of the pine lands on the eastern branch of this river.

In the progress of lumbering for the Mills at Tawas City, a team road has been built to within two miles of the lands above mentioned.

The following groups embrace all the lands of the Company on this stream.

No. of Group.	Acres.	Valuation.	No. of Group.	Acres.	Valuation.

O.

RIVER AU SABLE OF LAKE HURON.

This is the largest stream on the eastern slope of the state, emptying into Lake Huron. In its course it is the counterpart of the Manistee. It rises in the same region, the dividing ridge of the state, and the two streams run in a southerly direction, nearly parallel to each other for some fifteen miles, then turning almost at right angles, the Manistee takes its course to Lake Michigan, and the Au Sable to Lake Huron. The region embracing the head waters of both these streams is high and rolling, with numerous lakes, springs and small water courses tributary to the rivers. The soil is rich, and well adapted to agricultural purposes, having intermixed with the pine a variety of other timber of fine size and quality. The pine is generally very large, and is estimated to produce a large amount of clear lumber. On the lower waters of the Au Sable and near Lake Huron, the pine is also of excellent quality, yielding a large amount per acre. No lumbering has been done upon this stream.

The following groups comprise all the lands of the company on this river.

No. of Acres.	Acres.	Valuation.	No. of Group.	Acres.	Valuation
52	1,200	$2,000	250	560	1,160

218	1,320	330		17,938 36-100	$22,390

P.

PINE RIVER OF LAKE HURON.

The pine lands upon this river lie on its head waters and between the river Au Sable and Thunder Bay. The river is short in its course, having a number of branches, all concentrating and running into a small Lake, and thence through an outlet to the River Au Sable, just above its mouth. The pine is of the first quality. No lumbering has been done on this stream.

The following groups embrace all the lands of the Company on this stream.

No. of Group.	Acres.	Valuation.	No. of Group.	Acres.	Valuation.
83	620 34-100	1,000	97	960	1,600

96	680 71-100	1,190		8,749 66-100	$9,380

Q.

THUNDER BAY AND RIVER.

Under this head is embraced the large body of pine lands, lying in the region of the Bay. There are several rivers, which will serve for lumbering purposes when cleared, but the only stream which is now occupied for this purpose is the Thunder Bay river and its branches.

At the mouth of this river is one of the finest water powers in the State, and considerable lumbering has been done at the mills at this point. Several of the main branches of this river have been cleared for lumbering purposes, and no difficulty will be experienced in floating logs from any point on these streams where the pine lands of this company are located. A large body of excellent pine embracing some very valuable yellow pine timber, lies between Hubbard Lake and Lake Huron. Some of this timber will naturally be turned into Hubbard Lake and thence by the East branch into Thunder Bay River. Black River and Devil River will each be available for floating other portions of this timber to Lake Huron.

At Devil River a water mill has been in operation for years, and the river is cleared for several miles.

The mouth of Devil River is a good point for manufacturing and shipping lumber.

The following groups comprise all the lands of the Company in the Thunder Bay region:

No. of Group.	Acres.		Valuation.

R.

CHEBOYGAN RIVER.

This is a large stream, the outlet of several large lakes, into which the head branches of the stream flow, forming at the outlet of Cheboygan Lake, and from thence to the mouth, a broad, deep stream, which terminates in a natural harbor or bay on the Straits of Mackinaw. At this point, a few years since, the U. S. Land Office was located. The place was called Duncan, from the Proprietor, who owned a large mill, and for several years carried on the lumbering business. The timber for this mill was principally obtained from the west branch of the Cheboygan river, above Burts Lake, and the river was cleared as far up as the forks, near the lands of this Company. The east or south branch, emptying into cheboygon Lake, has not been cleared, but both streams are capable of floating logs from the highest point where the lands of this company are located.

The pine on both branches is generally of excellent quality, intermixed with hard timber, and growing upon good soil.

The following groups comprise all the lands of the company on the waters of the Cheboygan.

No. of Group.	Acres.	Valuation.
1.....	560	$1,050
2.....	520	160

T.

NORTH SHORE OF LAKE MICHIGAN.

The pine in this locality is along the shore of the Lake, west of Mackinaw, and embraces some very good timber, which, when cut, may be driven to the Lake through several streams, along which the pine is located.

No lumbering has been done here, but the proximity of most of the timber to the coast, will render it valuable in the future.

The following groups embrace the lands of the company on the shore of Lake Michigan, west of Mackinaw, including a few tracts on the islands in St. Mary's River.

No. of Group.	Acres.	Valuation.

U.

MONISTIQUE RIVER.

This is a large stream with several large branches, upon which the lands of the Company are located. On the Eastern branches, and on the upper waters, a considerable body of excellent pine is situated, which, although at present at a remote distance, may be easily floated to Lake Michigan whenever the streams are cleared. Near this tract of pine, and on the waters of Lake Superior is a compact body of some 4,000 acres, which will be available for the Lake Superior market, through the harbor of Grand Marais.

This is a fine natural harbor, and will doubtless be improved and made available for the accommodation of the shipping of Lake Superior. The other lands of the company on the Monistique River are situated on the waters near Lake Michigan, and embrace some of the best timber on the northern Peninsula. The mouth of the Monistique has many advantages as a lumbering point. A short distance from Lake Michigan there is a natural fall or rapids, affording a superior water-power, which has been improved and occupied in former years. A considerable lumbering business was carried on here, and but for the reverses of 1857, and the consequent depression in the lumber trade, this would have been increased and enlarged and in successful operation at the present time.

The natural facilities for manufacturing lumber, and the low price of the large body of lands now offered for sale, offer great inducements for reviving the business at this point.

The following groups comprise all the lands of the company on the Monistique and its branches, including also a few Groups near Grand Marais, Lake Superior.

V.

FISH DAM RIVER.

This river empties into Big Bay de Noquette, and is the outlet for a large and valuable tract of pine on its waters. The stream has never been occupied or cleaned for lumbering purposes, but this timber will soon be required, as a large lumber trade has been carried on in this vicinity for years on contiguous streams, which have been cleared and improved, and a good portion of the timber cut off. The trade from Little and Big Bay de Noquet is directly with Chicago, and the mills here are owned by parties who manufacture and ship on their own account.

W.

STURGEON RIVER.

This river is a good stream for lumbering and is at present occupied by parties in Chicago, who have made considerable improvements at the mouth, including a steam mill, which is supplied with timber from lands in proximity to the lands of this company. The lands of this company are connected with the body of pine on the Fish Dam River, already desbribed, and by reason of the opening of the river, are now available for lumbering purposes.

The following groups comprise all the lands of the company on these two streams.
